RE: public comment to DOI /MMS "scoping" of prog EIS.Reg-HQ-0024;
benefits/costs/risks to IMMEDIATE PERMITTING of CW
I'm NOT an official or representative to any organization but a Cape Cod ratepayer, taxpayer, & US caretaker angry about renewable energy uses.

Mr. President: 31 MAY 2006

What will be your legacy? On the approach to the USA, 130 pylons at the temple entrance like Seraphs converting kinetic energy into mechanical power is an electric image, more than a symbolic token, it is power to be reckoned with.

America needs energy expansion. your 4 point plan/vision/victory doesn't include large scale wind. We are addicted to oil but you could free us. Cape wind is revolutionary. It's a windfall.

An executive order today would gaurantee you quitclaim. By generating 420 mgw daily CW would memorialize your vision for clean power – no byproducts, fuel costs, emissions, accidents; just the product of your industry & CW ingenuity.

CW takes all the risks, you get all the glorious tribute. Contribute your leadership, style & philosophy and the USA will own on the OCS an evolving heritage of self-reliance.

FAST TRACK CW's expeditious & orderly development in a single, unifying initiative. You could declare a mounting imperative. It's your prerogative, your destiny.

Once up & running, and modern turbines are mesmerizing, you could bring the family down from Kennebunkport to see your legacy. A fair wind is a godsend. Four hundred and twenty megawatts of electricity every day would put downward pressure on the price of energy & oil, avoid imports, and give the American people great hope.

It would be a grave error to stop CW's promise. I plead for your leadership & courage. —BC
